

PRESENTERS

Terry L. Mathis
Founder, CEO

Terry is an international expert and safety culture practitioner, he has worked with hundreds of organizations customizing innovative approaches to achieve and sustain safety culture excellence. He is a regular presenter at NSC and ASSE, and is the author and presenter of multiple webinars and podcasts.

Shawn M. Galloway
President, COO

Shawn is a veteran of hundreds of international customized, advanced safety-improvement initiatives and has spoken at numerous company and industry conferences. He is the host of the weekly podcast series, Safety Culture Excellence.

LEAN BBS® INTERNAL CONSULTANT WORKSHOP

[3 DAYS]

Creating Internal Capabilities

This workshop will train participants to utilize ProAct Safety's Lean BBS® methodologies for facilitating an implementation. Most importantly, it will prepare the consultants to anticipate and handle the issues that can challenge the success of Behavior-Based Safety (BBS) efforts. Participants will also be able to identify opportunities to minimize the perception of change, achieve the quickest success possible, and ensure long-term process sustainability.

ProAct Safety has been extremely successful with their Internal Consultant Certification Workshop, which is designed for organizations that desire to internalize and sustain Behavior-Based Safety capabilities. Additionally, ProAct Safety is familiar with all of the major implementation methods and has developed a collection of best practices through our experience with over 1,000 successful Behavior-Based Safety implementations. Because of this unique position, we are able to instruct individuals on specific consultative methods to customize & implement Behavior-Based Safety, and attractive but ineffective approaches to avoid. Companies using this path strategy should have highly qualified personnel and sufficient internal resources.

ProAct Safety will certify the selected individuals to return to their location and begin designing and implement a customized Behavior-Based Safety process. This approach is not strictly a train-the-trainer course, nor is it intended to teach individuals to simply deliver training on Behavior-Based Safety. Every site will have its own unique challenges and cultures. To allow the internal consultants the most opportunities for success, it is extremely important that they understand and internalize the strategies to identify the site-specific variables that have or could become, problematic barriers. What works at one site will not always work at another.

Lean BBS® utilizes aspects of performance and quality systems to drastically reduce the typical internal resource requirements of a Behavior-Based Safety process. Lean Behavior-Based Safety focuses on the leveraged use of resources, resulting in better results in a shorter time, less disruption to operations, and less resistance from workers and unions.

Multiple Programs In Place

Re-energize Your Existing BBS Process

Unfortunately, it is common to see the results from many traditional Behavioral Safety processes plateau after the first two to three years of operation. At that point, the process can become routine and lose the original result-based orientation. The successes that motivated the process early-on disappear and the entire process tends to slowly lose momentum. Successful Behavior-Based Safety processes do not typically fade away, but can be much less effective than they are capable of being. This is the perfect time for BBS process improvement. Improvement strategies can accomplish several important objectives:

- Attain the next step in accident/reduction results through better targeting
- Increase the level of expertise in the personnel active in the process
- Provide new techniques to the observation and data analysis strategies
- Re-energize the process utilizing Lean BBS® techniques to improve results and increase employee participation
- Reduce manpower requirements to maintain the process
- Assess the existing Behavior-Based Safety process for foundations to build on
- Make more efficient use of site leaders and steering teams
- Narrow the focus of the checklist to improve efficiency
- Focus observations where they will produce the best results
- Learn tactics for continuous process improvement to ensure process sustainability

Materials

After completing the workshop, your Internal Consultant(s) are certified by ProAct Safety. The attendees will be provided with a binder containing the following handouts:

- Internal Consultant Overview
- Internal Consultant Implementation Guidebook
- Behavior-Based Safety Assessment Kit
- Steering Team Training Presentation
 - Learn The Process
 - Customize And Design Your Process
 - Analyzing The Data And Creating Data-Driven Action Plans
 - Sustain The Process And Self Auditing Techniques
- Steering Team Workbook
- Observer Training Presentation
- Observer Training Booklet
- Workforce Training Presentation
- Workforce Briefing Handout
- Managers' and Supervisors' Role in Behavior-Based Safety Presentation

Who Should Attend?
Corporate & Site Safety Professionals, Trainers, and Process Facilitators
Attendance is limited. This allows for an intimate setting and the ability to move through advanced topics at a fast pace.

Investment

\$4,500 per attendee

Recommended Option

It is ProAct Safety's experience-based belief that to ensure success, materials should be customized to reflect the unique culture of the location and details of the process. Handout materials are provided for seminar use only. Electronic materials are not included. If the attendees would like to license the materials for use at a single site or multiple locations, please contact ProAct Safety for a quote.

CM Points

Each seminar qualifies for 1.0 CM point per day from the ABIH (American Board of Industrial Hygiene).

Upcoming Dates/ Location

February 23-25, 2010
(Houston, TX)
