Fear & Inspiration

"Anyone can sit on their tail in a position of power, presenting edicts with accompanying punishments for nonconformance. Inspiring discretionary effort, on the other hand, requires using your head." [read the article](#)

Innovate or Follow

Careless adoption of a best practice may result in placing dangerous blinders on individuals within the organization, ceasing the search for vital fresh approaches. Someone, somewhere, pioneered the approach you are considering. Is your goal to innovate or follow? [keep reading](#)

For Sustainable Safety, Leaders Must Do More Coaching, Less Policing

Working only to obey the rules and wear PPE typically creates minimal effort safety cultures without proactive employees. [keep reading](#)

How to Destroy an Effective Culture

Utilizing fear is an effective conquering tactic... While it might work to move an organization from dismal in safety performance to average, it is the most ineffective approach to achieve and sustain excellence in culture and performance. [read the article](#)

Why We Fail to See Risk

Every second, countless bits of information are resented to us... The brain of a safety professional has been trained in a manner that facilitates the necessary recognition of risk. It is possible for others to benefit from this training as well. [read the article](#)

Preparing Workers for Safety Improvement

A common reason for failure of safety improvements is inadequate preparation of workers to understand and support the new effort. [read the article](#)
